

National Technology Day

Celebrating India's Innovation Journey

Kumaresan Arunachalam

(Associate Vice President, Avalon Consulting)

To achieve Vikasit Bharat by 2047, Indian youth must be empowered to lead the science and innovation space with ground-breaking ideas - mere participation will not suffice. Innovations from India should move beyond addressing local challenges to contributing to global progress.

This requires access to quality STEM education, especially in rural areas, along with the creation of strong mentorship ecosystems and reward systems that nurture talent.

Innovation hubs must actively encourage youth participation and foster an innovative spirit and an “act local, think global” mindset to drive meaningful, high-impact innovations
